

How to Choose an eBook Reader*

1—Know what eBook readers are An [eBook reader](#) is a device for browsing electronic files representing books. *Not all eBook readers can handle the same formats. In addition to certain seller-specific proprietary formats, many readers support HTML, plain text, and JPG but not all support the open standard ePub.^[4] This is an important distinction if you want to check out ebooks from your library, or to read the vast library of copyright-free (in the United States at least) ebooks at Project Gutenberg with nicer formatting than plain text files can provide.^[5]*

2—Know what to look for in an eBook reader

Memory: How many eBooks or other documents does the eBook reader have the capacity for?

Format type: Can the eBook reader handle a variety of file types or only one type (see previous step)? Is this ability (or lack of it) reflected in the price?

Connectivity: Does the eBook reader have 3G and [WiFi](#) connectivity?

Screen friendliness: Here you need to be concerned about viewability, color, size, and reflectiveness (glare).

Additional concerns = Weight and comfort / Battery life / Ease of downloading / Shareability / Extra features (can you add notes, etc.)

3—Read online product reviews—ask friends who may have one

4—Be careful about the ability to find eBooks and download them to your eBook reader—does it use wi-fi or USB? Can you download from the library?

5—Check the eBook provider's breadth of published content access

6—Visit the store to try the eBook reader—try BEST BUY they have many eReaders all in one place that makes it easy to compare

7— Check the warranty
